ABOUT MISSION RUBBER

Mission Rubber is part of the California based worldwide Mission Rubber group of companies; **the inventors of the rubber flexible coupling** over 60 years ago.

Since 2006, Mission Rubber UK has held a facility in Ecclesfield to service the Civils and Drainage industry with the support of Mucher Dichtungen. Developing, manufacturing and distributing couplings and seals for all pipe materials used in the low pressure civils and drainage industry. In general Mission Rubber products are used when two pipes need joining. Mission Rubber can specify a custom requirement is needed to find a long term reliable solution.

Whereas Mission's core business used to be in the civils and drainage industry only, nowadays the business fields have been extended and include plumbing, industry and OEM solutions.

Due to working closely with various pipe manufactures, combined with the long-term presence on the European market place, a product range has been formed that offers a reliable and permanent solution for almost any possible application. Especially the sealing technologies for repair solutions require a wide knowledge and expertise for all the different pipe materials and connection systems.

Our Sheffield facility includes a dedicated manufacturing area designed for customized solutions where, with its 60 years' experience, can identify and provide the right sealing solution. Our highly trained team have the ability to manufacture the correct solution quickly, and effectively, to direct to site when then need it.

The majority of the product range is manufactured by Mission Rubbers' parent company Mucher Dichtungen at the European headquarters in Frechen, near Cologne. Mucher currently distribute to over 30 different Countries with Mission Rubber UK supplying all across England, Wales, Scotland and Ireland.

Together with its customers Mission Rubber and Mucher are permanently developing new and innovative products for below and above ground applications. Our products are known for their high quality, for being easy to install and for solving problems on site. A good example of a new product development is the Multi-Flexible- coupling GENIUS.

New product developments are tested in our own test laboratory against all requirements resulting from the relevant standard. Any new developed seal will run through both material and functional tests. Before any product launch the new developed seal will be tested on live sites to ensure it fulfils all requirements and ease of installation on site.

OUR COMMITMENT

SUMMARIZES THE KEY COMPETENCE OF THE COMPANY.

GUIDANCE

You can trust that we are consulting you the right way!

Both commercial and technical consulting have got our highest priority. It is our ambition to offer solutions to our customers that are both technically reliable and commercially sustainable. The competence of our Sales & Technical team is outstanding and will continue to develop through training courses and further education.

The guideline to improve our support and consulting further is described in our quality management system according to BS EN ISO 9001:2015 which was launched over 25 years ago.

DELIVERY

3 p.m. Cut Off – Can be supplied next day!

Any orders received by 3pm with standard stocked sizes can be supplied next day either for stock or directly to site. Any custom sizes or large couplings can also be supplied next day depending on production availability. Overnight delivery fees apply.

INNOVATION

Our innovations help improving problems on site!

It is our companies aim to develop new products and to improve and further develop the existing range of products through rivaling new and innovative technologies. A good example is the initial launch of the TOX®-Technology to the sewerage industry. The TOX®-Technology eliminates the corrosion of the stainless steel components and increases the life circle.

AVAILABILITY

100% availability creates confidence!

Our entire product range is stocked in bulk. This includes both core range items with a high turn around as well as special items with a lower demand. The manufacturing department is the heart of our company. This is where we manufacture bespoke made large standard couplings and bushes on special customer demands and on time.

Our 100% availability and delivery capacity allows us to offer a proper solution for almost any problem within the sewerage industry.

SECURITY

On the safe side!

All our products comply with and exceed the requirements of the latest BS EN standards as well as national and international approvals. If it says MISSION you can depend on a safe installation process for the installer.

The high quality standards and certifications assume a life circle for Mission couplings of 50 years, providing proper packaging, stocking and installation.

INNOVATION

Couplings and other Mission joints and rings are constantly developed further, both in product design and material. They are characterised by quality, long-life cycle and user friendliness. **Our innovations are in the detail!**

TOX[®]-TECHNOLOGY

Traditional shear band fabrication entails spot welding of clamps to the shear band. Whereas with TOX[®]-TECHNOLOGY heat created during the welding process actually burns the stainless steel. The composition of the stainless steel is attacked and intercrystalline corrosion can result at the welding points.

The shear bands on Mission couplings incorporate the latest in stainless steel fastening techniques:

TOX[®]-TECHNOLOGY (Clinching process, no spot welds)

The negative aspects associated with spot welding are eliminated in this advance process, yet the bond meets or exceeds all relevant tensile strength and shear requirements.

Properties	TOX [®] -Point	Spot Weld
Corrosion	none	yes
Structural Change	none	yes
Dynamic Resilience	excellent	not perfect
Static Resilience	good	excellent
Energy Input	minimal	extremely high
Environment friendly manufacturing	excellent	bad (steams)

SALT SPRAY TEST SHOWS DIFFERENT CORROSION RESISTANCES

In a salt spray test according to DIN 50 021 SS (neutral) the different corrosion resistances of spot welded and toxed connection were compared.

Test Certificate No. 22000197 MPA NRW

After only a few days a clear corrosion was visible on the spot welded test blocks. The toxed (clinched) stainless steel bands did not show any corrosion after 504 hours (test ended after 3 weeks).

ADVANCED BOLTING SYSTEM

All of Missions large diameter couplings (from MSC 635) and all extra wide couplings are fitted with the all new advanced bolting system. Choosing the right clamp type (hi-torque, medium duty or bolted) and applying the right tightening torque is essential for large diameter couplings.

The bolting system is manufactured from stainless steel grade 1.4401 (AISI 316). It is positioned on the EPDM rubber sleeve and ensures the necessary compression to form a permanently sealed joint.

The purpose of this new development is to make the installation of the coupling to the pipe considerably quicker and much easier. The new bolting system has been engineered so that the sledge runs through the header casing, eliminating any protrusion of the bolt head.

This enables the installer to use a standard 13mm socket wrench which will reduce installation time by more than 50%.

Compared to other bolting systems, the advanced Mission bolting systems offers the following advantages:

- Even better sealing performance by wider clamps
- Easier installation by sledge system running through header
- Twice as quick to install than standard systems
- No special tools required, just use a standard 13 mm socket wrench
- Less risk of injury, therefore more health and safety conscious

„LOCK IN PLACE“ RUBBER PROFILE

Mission rubber sleeves are fitted with a unique rubber profile. The “lock in place” profile made from EPDM rubber ensures that the clamps and shear band are properly positioned on the sleeve and remain firmly in place during transit, stocking or installation on site.

The necessary compression of the rubber sleeve can only be guaranteed by a proper positioning of the stainless steel components.

Furthermore to the external based “lock in place” profile, the internal based sealing lines achieve a better sealing effect. Through the stepped sealing lines, additional EPDM sealing material can be compressed. This is of special advantage for sewerage pipes with a rough surface such as concrete pipes.

STAINLESS STEELS

Stainless steel refers to a range of iron based alloys which rely on their chromium content for resistance to corrosion. Research in a number of countries worldwide has shown that in normal soils austenitic stainless steel with a 17% chromium and 9% nickel content gives satisfactory performance, with a design life in excess of 100 years.

Whereas in poorly drained gravels, industrial or colliery spoil and in cases where the ground or groundwater contains chlorides (exceeding 1000 ppm) pitting of the steel can occur. In these circumstances the application of a protective wrapping such as "Denso tape" will give adequate protection. Alternatively, in these circumstances an austenitic stainless steel containing molybdenum (minimum 2%) will give better corrosion resistance without the need for additional protection.

Mission supplies two grades of austenitic stainless steel to suit either normal conditions or conditions when additional corrosion resistance is required. For use in normal conditions Missions standard products use components manufactured from grade 1.4301 (AISI 304) austenitic stainless steel to BS EN 10088-2. For those conditions requiring higher corrosion resistance then components manufactured from grade 1.4401 (AISI 316) austenitic stainless steel to BS EN 10088-2 is available, too. This grade contains 2% molybdenum and is especially suitable for marine environments.

BS EN 100 88	Trade Name	International Term	COMPOUNDS-%			
			Carbon (C)	Chromium (Cr)	Nickel (Ni)	Molybdenum (Mo)
1.4301	V2A	BS 304 / AISI 304	≤ 0,07	17,5-19,5	8,0-10,5	-
alternatively						
1.4307	V2A	BS 304 / AISI 304	≤ 0,03	17,5-19,5	8,0-10,0	-
1.4567	V2A	BS 304 / AISI 304	≤ 0,04	17,0-19,0	8,5-10,5	-
1.4404	V4A	BS 316 / AISI 316	≤ 0,03	16,5-18,5	10,0-13,0	2,0-2,5
alternatively						
1.4401	V4A	BS 316 / AISI 316	≤ 0,07	16,5-18,5	10,5-13,5	2,0-2,5
1.4571	V4A	BS 316 / AISI 316	≤ 0,08	16,5-18,5	10,5-13,5	2,0-2,5

The welding of stainless steel requires special competence and care as the steel can potentially corrode, resulting in an intercrystalline attack.

Since 2001 Mission successfully applies the TOX®-Technology which makes corrosion almost impossible.

CAOUTCHOUC ELASTOMERS

Rubber is a very flexible and elastic material with a high restoring force. In the technical application this material is officially named elastomer.

Deformation within the elastic range can be repeated limitless times without the change of the initial shape. As soon as the deformation forces are released, the elastomer returns back into its initial shape.

Elastomers are resistant against many acids, leaches and aromatic hydrocarbons which appear in the private, public and industrial sewage. For the sealing technology it is important to estimate this resistance, knowing the conditions of the joint such as the concentration of the medium, temperature, pressure as well as the static and dynamic strains.

The ideal elastomer material which is resistant to all gases and fluids does not exist yet. It is necessary to select the material which is the most suitable to meet the requirements demanded.

The most common elastomer types used in the sewage technology are EPDM, SBR, NBR, NR and FKM which all meet the current standards, such as BS EN 4060 and BS EN 681.

RESISTANCE OF ELASTOMERS

The following listed values are for guidance only. The values and characteristics cannot generally be transferred to all operating conditions.

PROPERTIES	EDPM	SBR	NBR	NR	FKM
Ozone Resistance	1	4	4	4	2
Oil Resistance	4	5	2	6	1
Fuel Resistance	5	6	2	6	1
Acid Resistance	1	3	4	3	1
Leach Resistance	1	3	4	3	1
Gas Permeability	4	4	2	5	2
Electric Resistance	2	2	5	1	2
Rebound Resilience	3	3	3	2	3
Tear Strength	3	2	2	1	2
Temperature Resistance	-40° bis + 120°C	-40° bis + 80°C	-30° bis + 100°C	-40° bis + 80°C	-40° bis + 200°C
Temporary max. Temperature	+ 160°C	+ 130°C	+ 130°C	+ 130°C	+ 230°C

1 = excellent 2 = good 3 = satisfactory 4 = sufficient 5 = poor 6 = fail

SHORT DISCRIPTION OF CAOUTCHOUC TYPES

EPDM (Ethylene – Propylene – Diene – Monomer)

Contains extraordinary resistance to oxygen, ozone and further atmospheric influences.
UV-light resistant.

SBR (Styrene Butadiene Rubber)

One of the major synthetic rubbers with similar properties as natural rubber (NR).
Compared to NR the abrasion resistance of SBR is superior but with an associated deterioration of the elasticity.

NBR (Acrylonitrile Butadiene Rubber)

The basis for NBR is a mixture of acrylonitrile and butadiene. The higher the acryl percentage, the better the resistance against mineral oils and fuels but with an associated deterioration of the elasticity and the cold flexibility.

NR (Natural Rubber)

The raw material is latex milk, extracted from caoutchouc trees. Unlike several synthetic rubbers, NR particularly possesses excellent elastic qualities.

FKM (Fluorinated Rubber)

FKM is a copolymer of highly fluorinated hydrocarbon and has very good resistance to media, ozone and aging. It is used in particular for applications with high process temperatures and aggressive media.

QUALITY MANAGEMENT SYSTEM, CE-MARKING

Mission Rubber UK has a quality management system according to BS EN ISO 9001:2015. The guideline for manufacturing, product development, sales and distribution. Developing the quality management system further is one of our European strategic aims.

The compliance of Mission Rubber products are to all UK standards and approvals allows Mission Rubber to UKCA-mark its products. With the UKCA marking, Mission Rubber UK declares that all products meet the requirements of the following standards both for functional and material.

WIS 4-41-01

Standard Couplings and Bushes (up to 620 mm diameter) comply with the requirements of Water Industry Specification WIS 4-41-01 „Specification for flexible couplings for gravity sewerage and drainage pipes“.

CONSTRUCTION PRODUCTS REGULATION

The European construction products regulation is in place since 01.07.2013.

As a manufacturer of building and construction products, Mücher Dichtungen® declares the conformity of all products according to the European standards and approvals in its declaration of performance.

FLEXIBLE COUPLING STANDARDS

Since the introduction of the UKCA mark, Mission Rubber UK Limited have introduced the correct standards to conform with the requirements in the UK Market. Until 2014 couplings with and without shear band were only standardized in the BS EN 295-4 when used with clay pipes.

Mission Rubber UK, with the support and testing facilities of Mücher, secures its high product quality and the compliance with the UK standards. **Mission Rubber is able to proof test results and compliances although the external quality control is no longer obligatory.**

Multi-Flexible-Coupling

GENIUS

- + One coupling for all pipe materials
- + For above and below ground
- + With integrated bushes
- + Resistant to 2.5 bar

Multi-Flexible-Coupling GENIUS – for the connection of all pipe systems with different or same outside diameters

The Multi-Flexible-Coupling GENIUS with integrated bushes connects all plain ended pipes within one dimension and can be used inside and outside of buildings.

The right solution always to hand: What ever pipe material needs to be jointed within one dimension, the GENIUS will always be the right solution for the contractor.

INSTALLATION

Bush at smaller pipe remains integrated – fold out and remove bush at larger pipe.

Slide GENIUS over larger pipe.

Push smaller pipe into GENIUS and tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Multi-Flexible-Coupling GENIUS with integrated bushes connects all plain ended pipe materials within one dimension with different or same outside diameters.

Standard Coupling

MSC TYPE 2B

- + For all pipe materials
- + For above and below ground
- + For usage with bushes
- + Resistant to 2.5 bar

Standard Coupling Type 2B – for the connection of all pipe systems with different or same outside diameters

The Standard Coupling Type 2B connects all plain ended pipes within same or different dimensions and is compensating differences in outside diameters of max. 12 mm. Larger differences will require the use of bushes.

The Standard Coupling Type 2B can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION »

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION »

TECHNICAL SPECIFICATION »

Standard Coupling Type 2B for connection of all plain ended pipe materials with different or same outside diameters for applications above and below ground as well as inside and outside of buildings. Differences in outside diameters of more than 12 mm will require the use of bushes.

Large Coupling

MLC LARGE COUPLING

- + For all pipe materials
- + For above and below ground
- + For usage with bushes
- + Resistant to 2.5 bar

Standard Coupling Type 2B – for the connection of all pipe systems with different or same outside diameters

The Standard Coupling Type 2B connects all plain ended pipes within same or different dimensions and is compensating differences in outside diameters of max. 12 mm. Larger differences will require the use of bushes.

The Standard Coupling Type 2B can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION »

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION »

TECHNICAL SPECIFICATION »

Standard Coupling Type 2B for connection of all plain ended pipe materials with different or same outside diameters for applications above and below ground as well as inside and outside of buildings. Differences in outside diameters of more than 12 mm will require the use of bushes.

Rubber Bush

MBC RUBBER BUSH

- + For compensating different outside diameters
- + In combination with Standard Coupling
- + Extra tightness through pretension
- + Resistant to 2.5 bar

Rubber Bush material – in combination with Standard Coupling – is to bridge the gap between pipes when the outside diameter has a difference of 12mm.

By combining multiple bushes made from different thicknesses (5, 8, 9, 14, 24, 32 and 40 mm) almost any connection can be achieved ensuring a tight fit.

Bushes are manufactured with pretension and tighten against each other.

INSTALLATION

Slide coupling completely over larger plain end.

Slide bush over smaller plain end and position bush properly.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Bushes with pretension for compensating larger outside diameter differences. Outside diameter differences need to be taken on site.

____ Qty ____ Price/Unit ____ Total

Manufacturer:

MISSION RUBBER (UK) LTD., Sheffield, S35 9TG
T +44 (0) 114 257 - 0040

Pressure Tightness:

2.5 bar water / -0.3 bar vacuum

Jetting Resistance:

120 bar

Corrosion Resistance:

TOX®-Technology

Sealing Material:

EPDM or Nitrile (NBR) rubber with lock in place profile according to BS EN 681-1

Temperature Resistance: -40°C to +120°C, temporary max. temperature +160°C

Standard/Approval: BS EN 16397-2

Extra Wide Coupling

MXL WIDE COUPLING

- + For all pipe materials
- + For above and below ground
- + Extra wide profile
- + Resistant to 2.5 bar

Extra Wide Coupling MXL – for safe connecting of large diameter pipes

The Extra Wide Coupling MXL connects all plain ended pipes within same or different dimensions and is compensating differences in outside diameters of max. 12 mm. Larger differences will require the use of bushes.

The extra wide profile allows a safe and flexible laying of large diameter pipes from DN 800.

INSTALLATION »

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION »

TECHNICAL SPECIFICATION »

Extra Wide Coupling MXL for connecting all plain ended pipe materials with different or same outside diameters for applications above and below ground. Differences in outside diameters of more than 12 mm will require the use of bushes.

Coupling Kit

EASY-REP MER

- + For repair of damage or cracks
- + No stop of water flow
- + For above and below ground
- + Resistant to 0.5 bar

Coupling Kit EASY-REP – allows local repairs without stopping the water flow

EASY-REP is a rubber flexible repair coupling supplied in an easy to install kit form.

EASY-REP is designed to allow pipe repairs to be carried out to sewerage and drainage pipelines which have been subject to local damage or cracks, without the need to replace the section of pipe or even to stop the flow of water whilst carrying out the repair.

INSTALLATION

Coat rubber glue to the sleeve.

Tighten shear band reciprocally.

Tighten clamps.

DESCRIPTION

TECHNICAL SPECIFICATION

Coupling Kit EASY-REP for local repairs of damaged or cracked waste water pipes made from all materials. The outside diameter on the damaged pipe section needs to be taken on site.

Pipe DN/Material _____

Adaptor Coupling

MAC ADAPTOR COUPLING

- + Adaptor for different outside diameters
- + For above and below ground
- + Reliable and durable solution
- + Resistant to 0.6 bar

Adaptor Coupling MAC – for the connection of all pipe systems with different outside diameters

The Adaptor Coupling MAC joints all plain ended pipes with different outside diameters and materials.

The Adaptor Coupling MAC can be used for applications above and below ground as well as inside and outside of buildings.

When changing nominal diameters, the flow direction needs consideration.

INSTALLATION »

Position plain ended pipes.

Slide adaptor coupling over one plain end.

Push other plain ended pipe into adaptor coupling and tighten clamps.

DESCRIPTION »

TECHNICAL SPECIFICATION »

Adaptor Coupling MAC for the connection of all plain ended pipe systems with different outside diameters for applications above and below ground as well as inside and outside of buildings.

Drain Coupling

MDC DRAIN COUPLING

- + Coupling for same outside diameters
- + For above and below ground
- + Reliable and durable solution
- + Resistant to 0.6 bar

Drain Coupling MDC – for the connection of all pipe systems with same outside diameters

The Drain Coupling MDC connects all plain ended pipes with same outside diameters and materials.

The Drain Coupling MDC can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION »

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps.

DESCRIPTION »

TECHNICAL SPECIFICATION »

Drain Coupling MDC for the connection of all plain ended pipe systems with same outside diameters for applications above and below ground as well as inside and outside of buildings.

ROLL-RING MRR

- + Connection to sockets without seal
- + Socket connection remains
- + Reliable and durable solution
- + Resistant to 0.5 bar

Roll-Ring – for the connection of spigots from all pipe materials to sockets without seal

The Roll-Ring connects spigots from all materials to sockets without seal (e.g. clay or concrete).

By using the Roll-Ring there is no need for cutting off the socket and connecting with a flexible coupling.

The Roll-Ring is individually produced to the customer's requirements, to provide the right compression for effective sealing.

INSTALLATION »

Do not use lubricant.

Position Roll-Ring in front of socket.

Push spigot into socket.

DESCRIPTION »

TECHNICAL SPECIFICATION »

Roll-Ring for the connection of spigots from all pipe materials to sockets without seal.

Roll Ring can also be used in between the ridges of ribbed pipes. This includes Twinwall, Structural and Ultra Rib Pipe.

Wedge-Shaped Seal

MKG CONCRETE SEAL

- + Seal for concrete manholes
- + Fixed seal
- + Caoutchouc elastomer according to DIN EN 681-1
- + Resistant to 0.5 bar

Wedge-Shaped Seal MKG – for the connection of manhole rings according to DIN 4034

The Wedge-Shaped Seal MKG is used for sealing concrete manholes. The seal is made from a caoutchouc elastomer with a dense structure. It is positioned on the spigot of the manhole shaft and is compressed between the manhole rings.

INSTALLATION

Slide MKG seal over spigot.

Apply lubricant to MKG seal.

Push manhole rings together.

DESCRIPTION

TECHNICAL SPECIFICATION

Wedge-Shaped Seal MKG for concrete manholes according to DIN 4034. The connection requires testing according to DIN EN 1610.

Joining Element

BKL CLAY TO CONCRETE SEAL

- + Joint integrated in concrete manholes
- + Polystyrene supporting element
- + Joint system F
- + Resistant to 0.5 bar

BKL Joining Element – for the connection of clay pipes to concrete manholes and road gullies

The BKL Joining Element is integrated into concrete manholes or road gullies (socket L, joint system F) when manufactured.

To get the necessary space for installation, the BKL Joining Element is installed together with a polystyrene supporting element.

INSTALLATION 

Remove polystyrene from socket.

Apply lubricant to BKL joint.

Push pipe into socket.

DESCRIPTION TECHNICAL SPECIFICATION

BKL Joining Element including polystyrene supporting element according to DIN EN 295-4 for the connection of clay pipes (joint system F) to concrete manholes or road gullies according to DIN 4034 and DIN EN 1917.

Sewer Saddle

TWISTEE®

- + Connects to concrete and clay main sewer pipes
- + Various lateral pipe materials can be connected
- + Resistant to shear and vertical loads resulting from differential settlement
- + Resistant to 0.6 bar hydrostatic pressure
- + WRC and Anglian Water Approved

Sewer Saddle TWISTEE® - for connecting lateral pipes to main sewers made of clay or concrete

As the Sewer Saddle TWISTEE® has been designed with a spigot, it offers the possibility to connect to any lateral pipe material.

INSTALLATION

Drill a clean hole using a core drill (drill stand is recommended). For reinforced concrete pipes apply corrosion protection liquid on the inside wall of the hole.

Insert TWISTEE gasket considering flow direction and apply the lubricant on the thread.

Screw the TWISTEE spigot into the gasket using the installation wrench.

DESCRIPTION

TECHNICAL SPECIFICATION

Sewer Saddle TWISTEE for connecting lateral pipes to thick walled main sewers.

TWISTEE® Clay
with adaptor

Place adaptor on to the TWISTEE® spigot and tighten the first clamp. Insert the clay pipe and tighten the second clamp.

TWISTEE® Twin Wall Plastic/
GRP with coupling

Place coupling on to TWISTEE® spigot and tighten the first clamp. Place rubber ring in the second groove of the Twin Wall Plastic pipe. Then connect the pipe and tighten the second clamp.

Sewer Saddle

TWISTEE®

- + Connects to concrete and clay main sewer pipes
- + Design to push directly with PVC Pipe
- + Resistant to shear and vertical loads resulting from differential settlement
- + Resistant to 0.6 bar hydrostatic pressure
- + WRC and Anglian Water Approved

Sewer Saddle TWISTEE® - for connecting lateral pipes to main sewers made of clay or concrete

As the Sewer Saddle TWISTEE® has been designed with a socket, it offers the possibility to connect to any lateral pipe material.

INSTALLATION »

Drill a clean hole using a core drill. For reinforced concrete pipes apply corrosion protection liquid on the inside wall of the hole.

Insert TWISTEE gasket considering flow direction and apply the lubricant on the thread.

Screw the TWISTEE spigot into the gasket using the installation wrench.

DESCRIPTION »

Sewer Saddle

T-FLEX

- + For main sewers with smooth surface
- + For all sewer materials
- + Sealing against the outer sewer wall
- + Resistant to 0.5 bar

Sewer Saddle T-Flex – for connecting lateral pipes to existing sewers or drains

The seal of the Sewer Saddle T-Flex is formed by compression of the rubber apron against the outer sewer wall and connects laterals to existing sewers or drains with a smooth surface.

The size range of the Sewer Saddle T-Flex is designed to fit plain ended plastic pipes.

The tolerances of the Sewer Saddle T-Flex allow the use of standard core drills.

INSTALLATION

Drill and clean hole 90° to pipe axis.

Position T-Flex centrally over cored hole and tighten clamps around the main sewer.

Push lateral pipe into saddle and tighten clamp.

Lateral Connector

LTC

- + Connecting PP/PVC to Twin Wall or Ultra-Rib
- + Universal connector for many sewers
- + Reliable and durable solution
- + Resistant to 0.5 bar

Lateral Connector LTC – for connecting lateral plastic pipes to existing structured walled main sewers

The Lateral Connector LTC connects smooth walled plastic pipes to existing structured walled sewers like Twin Wall or Ultra-Rib and offers an economical and easy to install solution on site.

The Lateral Connector LTC can be generally used for various structured walled sewers, depending on the wall thickness (see application advices).

INSTALLATION

Drill and clean hole 90° to pipe axis.

Insert LTC into main sewer.

Push lateral pipe into LTC and tighten clamp.

Lateral Connector

RRD M140

- + Connecting thin walled laterals to concrete sewers
- + Reliable and durable solution
- + Adaptable to pipe wall thickness
- + Resistant to 0.5 bar

Lateral Connector M140 – for connecting thin walled lateral pipes to concrete main sewers

The Lateral Connector M140 connects thin walled pipes (e.g. plastic, cast iron, etc.) to concrete main sewers.

The design of the Lateral Connector M140 allows cutting the connector to the length of the main sewer wall thickness.

INSTALLATION

Drill and clean hole 90° to pipe axis.

Cut M140 to length of wall thickness and insert M140 into main sewer.

Apply lubricant to lateral plain end and push lateral into M140.

DESCRIPTION

TECHNICAL SPECIFICATION

Lateral Connector M140 for connecting thin walled lateral pipes to existing concrete main sewers, covering a wall thickness of maximum 140 mm.

COMMERCIAL NON RETURN VALVE

- + Resistant to 1 bar (10 m head) back pressure
- + Low weight for ease of installation yet with high mechanical strength
- + Resistant to all normal sewage effluents operating at normal temperatures (below 80° C) and not containing harmful industrial effluents.
- + Seals at a low level of back pressure
- + Easily connected to any type of pipe material by means of couplings (not included)
- + Low maintenance

A range of GRP one-way flap valves designed for installation inside a pipe network using Mission Rubber Standard Couplings and Bushes.

NOTE: Coupling required but dependent on size of pipework

DOMESTIC NON RETURN VALVE

- + Recommended for foul
- + Rodent resistant as standard
- + comply with international standards for sewage pipe connections

A range of PVCu non-return valves complying with the requirements of BS EN 13564 - Anti-flooding devices for buildings. Sizes DN 100 to DN200 are certified by the German Institute LGA.

These valves are water tight to a pressure of 0.5 bar (5m Head).

These valves have a spigot and socket with integral seal as standard for direct connection to solid walled PVCu pipe. They can be connected to other pipe material using Mission Rubber Flexible Couplings - contact our sales office for more information.

LUBRICANT

- + Jointing forces are minimised
- + Compatibility with other sealing materials
- + For plastic, clay and concrete pipes
- + Various package sizes

Lubricant - minimizing the jointing forces for pipe laying

Lubricant is used to minimize the jointing forces when laying pipes such as plastic, clay or concrete.

Lubricant is compatible with other sealing materials.

INSTALLATION »

Clean socket and spigot.

Apply lubricant to socket and spigot.

Push pipes together.

TECHNICAL SPECIFICATION »

Lubricant for minimizing the jointing forces for pipe laying.

Pipe Material _____

Package Size _____

___ Qty ___ Price/Unit ___ Total

Manufacturer: MISSION RUBBER (UK) LTD., Sheffield, S35 9TG
T +44 (0) 114 257 - 0040

Scope of Application: Plastic Pipes (White), Clay Pipes (Blue), Concrete Pipes (Gray)

Packaging Size: White 250 g Tube, 500 g Tube, 1 kg Can, 3 kg Pail
Blue 1 kg Can, 3 kg Pail
Gray 5 kg Pail, 10 kg Pail

Standard/Approval: Safety Data Sheet (EU) No. 1907/2006

PRODUCT RANGE

Chemical Coupling

FKM CHEMICAL COUPLING

- + Fluoro-Elastomer FKM
- + Industrial applications
- + Chemical and thermal resistant
- + Resistant to 0.6 bar

FKM chemical coupling – chemical and thermal resistant for industrial applications

The FKM chemical coupling joins plain ended industrial pipe systems with same diameters. It is suitable for above ground and non-pressure applications.

THE FKM-gasket allows a high chemical resistance and a thermal stability of up to +180°C.

The stainless steel shear band covers the entire coupling, therefore protecting the elastomer sleeve.

INSTALLATION

Position plain ended pipes.

Slide sleeve over one plain end and push second pipe into the sleeve.

Tighten clamps reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

FKM chemical coupling used in above ground chemical resistant plain ended industrial pipe systems with same diameters. THE FKM-gasket allows a high chemical resistance and a thermal stability of up to +180°C.

Chemical Coupling Multi-Connector

TRANSFER

- + Connector for different materials and dimensions
- + For above ground industrial applications
- + Stainless steel shear band protects the entire sleeve
- + Resistant to 0.6 bar

Multi-Connector TRANSFER – for the connection of plain ended industrial pipe systems from all materials

The Multi-Connector TRANSFER joints plain ended industrial pipe systems with same or different diameters.

The stainless steel shear band covers the entire coupling, hence protecting the elastomer sleeve.

When changing nominal diameters, the flow direction needs consideration.

INSTALLATION

Position plain ended pipes.

Slide sleeve over one plain end and push shear band over.

Tighten clamps reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Multi-Connector TRANSFER for the connection of plain ended industrial pipe systems from different materials with same or different diameters.

NO HUB COUPLING

- + Connects to cast iron pipes
- + For above and below ground applications
- + Stainless steel shear band protects the entire sleeve
- + Resistant to 0.6 bar

Shielded couplings connect **Cast Iron** hubless soil pipe and fittings in sanitary and drain waste and vent (DWV) applications. For non-pressure, gravity flow applications only. Recommended for **above and underground** installations. **Easy to install and reuse.**

INSTALLATION

Ends of cut pipe must be smooth and square.

Place gasket on no hub cast iron pipe or fitting, firmly seated against the raised stop mark of pipe or fitting. Place stainless steel shield assably over the end of other pipe.

Tighten clamps reciprocally.

TECHNICAL SPECIFICATION

Multi-Connector TRANSFER for the connection of plain ended industrial pipe systems from different materials with same or different diameters.

Standard Coupling

MSC TYPE 2B

- + For all pipe materials
- + For above and below ground
- + For usage with bushes
- + Resistant to 2.5 bar

Standard Coupling Type 2B – for the connection of all pipe systems with different or same outside diameters

The Standard Coupling Type 2B connects all plain ended pipes within same or different dimensions and is compensating differences in outside diameters of max. 12 mm. Larger differences will require the use of bushes.

The Standard Coupling Type 2B can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION

TECHNICAL SPECIFICATION

Standard Coupling Type 2B for connection of all plain ended pipe materials with different or same outside diameters for applications above and below ground as well as inside and outside of buildings. Differences in outside diameters of more than 12 mm will require the use of bushes.

OEM Projects

OEM

- + Custom rubber profile
- + Chemical and recyclable rubber available
- + Technical expertise
- + OEM steel bands available

Mission Rubber, with the support of Mûcher, have the tools and machinery available to create custom rubber products when the demand is required. With the testing facilities we have we can ensure they meet the British Standard guides required and UKCA Marking.

TECHNICAL SPECIFICATION

Pipe 1	DN/Material	_____
Pipe 2	DN/Material	_____
Article Number	_____	
	Qty	Price/Unit Total
Manufacturer:	MISSION RUBBER (UK) LTD., Sheffield, S35 9TG T +44 (0) 114 257 - 0040	
Pressure Tightness:	TBC with testing or to meet application	
Jetting Resistance:	TBC with testing or to meet application	
Sealing Material:	EPDM or Nitrile (NBR) rubber with lock in place profile according to BS EN 681-1, chemical resistance, recyclable	
Stainless Steel:	306 and 316	
Temperature Resistance:	TBC with testing or to meet application	
Standard/Approval:	Standards will meet the application requirement	

OEM COUPLINGS

With 70 years of expertise with Flexible Rubber Couplings, Mission Rubber can create a set of couplings under OEM for your requirements. The couplings can be OEM / White Labeled to your requirement. The coupling will come complete with BE EN Standards 16397, 681-1 and 295:4 to ensure your products meet their requirements. The products will also be UKCA marked.

OEM RUBBER PROFILE / SEALS

Mission Rubber UK have the tools and machinery required to create custom rubber profile suitable to your requirement. We can create tools in house for extruded rubber and vulcanise the join required. With a number of materials available to us we can meet your requirement based on standard EPDM rubber, chemical resistance and recycled materials. All meeting the BS EN 681-1 and UKCA markings.

OEM STEEL BANDS

Mission Rubber and Muecher use state of the art machines to create steel bands for a number of couplings on a daily basis. We have used the machines to create custom OEM bands to a requirement for the customer needs. Using 304 and 316 grade steel, we have the ability to create the bands, with bolting system, to meet the standards set out.

Single Pipe Connector SPC

Drain Coupling MDC

Multi-Flexible-Coupling GENIUS

Internal Drain Connector MRS

Adaptor Coupling MAC

Push-in Adaptor MPA

Multi Pipe Connector MPC

Drain Connector MAS

Standard Coupling MSC

Internal Drain Connector

MRS

- + For different nominal sizes
- + Internal seal
- + Resistant to 0.5 bar
- + Easy & Quick installation

Internal Drain Connector – for the internal connection of pipes with different dimensions.

The internal drain connector is suitable for flush mounting as well as for exposed pipe connections. The MRS is made of a high-quality EPDM sealing material, which is characterized by durability and has a noise-reducing effect in downpipes.

INSTALLATION

Position pipe ends.

Fold in or cut off internal drain connector at the desired position, depending on the connection situation.

Insert internal drain connector into larger pipe, apply lubricant and push in smaller pipe.

DESCRIPTION

TECHNICAL SPECIFICATION

Internal Drain Connector – for the internal connection of pipes with different dimensions.

Drain connector MAS – for internal connection of SML pipes to plastic pipes

The connector is made of a high-quality EPDM sealing material, which is characterised by durability and has a noise-reducing effect in downpipes.

It is suitable for flush mounting as well as for use with exposed pipe connections.w

INSTALLATION

Position pipe ends.

Press the drain connector into the plastic socket as far as it will go. Lip seal in plastic socket does not need to be removed.

Push the SMU-pipe into the drain connector.

DESCRIPTION

TECHNICAL SPECIFICATION

Drain connector MAS – for internal connection of SML pipes to plastic pipes.

PRODUCT RANGE

SINGLE PIPE CONNECTOR SPC						
Article Number	Reference	A Size Range (mm)	B Size Range (mm)	L Length (mm)	resistant to (bar)	Weight (kg)
500120	Single Pipe Connector SPC 45 32	45	32	23	0,5	0,02
500121	Single Pipe Connector SPC 45 40	45	40	23	0,5	0,01
500000	Single Pipe Connector SPC 73 50	73	50	23	0,5	0,10
500122	Single Pipe Connector SPC 123/130 102	123 / 130	102	102	0,5	0,30
500001	Single Pipe Connector SPC 150 110	150	110	36	0,5	0,20

The single pipe connector is an internal pipe connection designed as a push fit application. The larger number of the SPC will push in to ID of the desired pipe. The smaller number of the SPC is for the OD of the pipe you can push in to the SPC.

Example: The SPC 150/110 can be pushed in to any pipe with an ID of 150 (6"), a pipe with an OD of 110 can then be pushed in to the SPC to create a water tight seal.

MULTI PIPE CONNECTOR MPC

- + For different dimensions and materials
- + Internal seal
- + For horizontal and vertical installations
- + Resistant to 0.5 bar

Multi Pipe Connector – for the internal connection of pipe systems with different dimensions and materials

The Multi Pipe Connector joints pipe systems with different dimensions and materials and can be used for flush-mounting and non-buried pipe connections. Multi Pipe Connectors can be combined with other Multi Pipe Connectors.

The Multi Pipe Connector is made from a durable EPDM rubber and has a noise reducing impact on downpipes.

INSTALLATION

Position pipe ends and cut off Multi Pipe Connector depending on the application.

Fold in Multi Pipe Connector depending on the application.

Insert Multi Pipe Connector into larger pipe, apply lubricant to plain ended pipe and insert smaller pipe.

DESCRIPTION

PRODUCT RANGE >>

MULTI PIPE CONNECTOR MPC						
Article Number	Reference	A Size Range (mm)	B Size Range (mm)	L Length (mm)	resistant to (bar)	Weight (kg)
500002	Multi Pipe Connector MPC 50 40/32	50/40	32	64	0,5	0,10
500003	Multi Pipe Connector MPC 64/58 50/40	64/58	50/40	96	0,5	0,10
500004	Multi Pipe Connector MPC 75/70 50/40	75/70	50/40	98	0,5	0,10
500005	Multi Pipe Connector MPC 96/83 75/50	96/83	75/50	100	0,5	0,20
500126	Multi Pipe Connector MPC 100/105 75/50	100-105	75/50	70	0,5	0,20
500006	Multi Pipe Connector MPC 100/105 90/75	100-105	90/75	70	0,5	0,20
500007	Multi Pipe Connector MPC 130/123 110/75	130-123	110/75	69	0,5	0,30
500008	Multi Pipe Connector MPC 150/125 110	150/125	110	120	0,5	0,40

The multi pipe connector is an internal pipe connection designed as a push fit application. The rubber can either be cut or folded in on itself to create the desired seal required. Each number on the MPC represent what sizes the MPC can achieve. Multiple MPC can be put together making it more adaptable.

Example: The MPC 50 | 40/32 - This can be pushed in to any pipe with an ID of 50mm. If the connecting pipe is 40mm the flap is cut away and the pipe is pushed in. If the connecting pipe is 32mm the flap is folded in and the pipe is pushed in.

The right solution is always to hand!

MULTI PIPE CONNECTOR KIT

Article-No. 500113

The Multi Pipe Connector Kit consists of 6 Multi Pipe Connectors which offer solutions when connecting pipe systems within 32 - 130 mm diameter.

The Multi Pipe Connector Kit is the ideal basic equipment for every workshop van. The right solution always to hand! The connection can be made immediately and the site work can continue without delay.

Adaptor Coupling

MAC ADAPTOR COUPLING

- + Adaptor for different outside diameters
- + For above and below ground
- + External compression seal
- + Resistant to 0.6 bar

Adaptor Coupling MAC – for the external connection of all pipe systems with different outside diameters

The Adaptor Coupling MAC connects all plain ended pipes with different outside diameters and materials.

The Adaptor Coupling MAC can be used for applications above and below ground as well as inside and outside of buildings.

When changing nominal diameters, the flow direction needs consideration.

INSTALLATION »

Position plain ended pipes.

Slide adaptor coupling over one plain end.

Push other plain ended pipe into adaptor coupling and tighten clamps.

DESCRIPTION »

Coupling

MSC TYPE 2B

- + For all pipe materials
- + For above and below ground
- + For usage with bushes
- + Resistant to 2.5 bar

Coupling MSC Type 2B - for the external connection of all pipe systems with different or same outside diameters

The Coupling MSC Type 2B connects all plain ended pipes within same or different dimensions and is compensating differences in outside diameters of max. 12 mm. Larger differences will require the use of bushes.

The Coupling MSC Type 2B can be used for applications above and below ground as well as inside and outside of buildings.

INSTALLATION »

Position plain ended pipes.

Slide coupling over one plain end.

Center coupling over joint. Tighten clamps and shear band reciprocally.

DESCRIPTION »

TECHNICAL SPECIFICATION »

Coupling MSC Type 2B for the external connection of all plain ended pipe materials with different or same outside diameters for applications above and below ground as well as inside and outside of buildings. Differences in outside diameters of more than 12 mm will require the use of bushes.

Multi-Flexible-Coupling

GENIUS

- + One coupling for all pipe materials
- + For above and below ground
- + With integrated bushes
- + Resistant to 2.5 bar

Multi-Flexible-Coupling GENIUS – for the connection of all pipe systems with different or same outside diameters

The Multi-Flexible-Coupling GENIUS with integrated bushes joints all plain ended pipes within one dimension and can be used inside and outside of buildings.

The right solution always to hand: What ever pipe material needs to be jointed within one dimension, the GENIUS will always be the right solution for the contractor.

INSTALLATION »

Bush at smaller pipe remains integrated – fold out and remove bush at larger pipe.

Slide GENIUS over larger pipe.

Push smaller pipe into GENIUS and tighten clamps and shear band reciprocally.

DESCRIPTION »

TECHNICAL SPECIFICATION »

Multi-Flexible-Coupling GENIUS with integrated bushes for the connection of plain ended pipe materials within one dimension with different or same outside diameters.

Manufacturer: MISSION RUBBER (UK) LTD., Sheffield, S35 9TG
T +44 (0) 114 257 - 0040

Pressure Tightness: 2.5 bar water / -0.3 bar vacuum

Jetting Resistance: 120 bar

Corrosion Resistance: TOX®-Technology

Sealing Material: EPDM or Nitrile (NBR) rubber with lock in place profile according to BS EN 681-1

Stainless Steel: AISI 304/1.4301, alternatively AISI 316/1.4404 according to BS EN 10088-2

Temperature Resistance: -40°C to +120°C, temporary max. temperature +160°C

Standard/Approval: BS EN 295-4

If the pipe OD is between 125mm and 137mm the inner bush needs removing.		If the pipe OD is between 150mm and 162mm the inner bush needs removing.		If the pipe OD is between 176mm and 192mm the inner bush needs removing.	

FLEXIBLE TEE MPT

- + 90° Tee Junction to existing drains
- + For horizontal and vertical installations
- + Reliable and durable solution
- + Resistant to 0.5 bar

Flexible Tee – for the connection to existing drains

The Flexible Tee connects new to existing drains and is suitable for flush-mounting and non-buried pipe connections.

The Flexible Tee is made from a durable EPDM rubber and has a noise reducing impact on downpipes.

INSTALLATION

Cut off and remove pipe section. Loosen pipe support.

Position Flexible Tee in between plain ended pipes.

Insert plain ended pipes, tighten clamps and fix pipe support.

DESCRIPTION

TECHNICAL SPECIFICATION

Flexible Tee for the 90° Connection to existing drains.

RAINWATER ADAPTOR

- + Internal Pipe connection
- + Pushing in to 4" Pipe
- + Suitable for 68mm Round and Square PVC
- + Easy to install

The Mission Rubber Rainwater Adaptor will accept 65mm square and 68mm round downpipe. External rainwater downpipes can be connected directly to a surface water drain or, depending on the design, via a gully trap to the underground drainage system.

PRODUCT RANGE

RAINWATER ADAPTOR

Reference	Size A (mm)	Size B (mm)	resistant to (bar)
MWA 096	100	65-68	0,5

WASTE ADAPTOR

- + Internal Pipe connection
- + Push in pipes between 32 - 50mm
- + EPDM Rubber
- + Easy cut out ridges

The Mission Rubber Waste Adaptor will allow waste water pipes of 32mm, 40mm and 50mm to be connected directly into 110mm underground drainage pipe. Cut to the correct size and push in.

MISSION RUBBER

OUR COMMITMENT

GUIDANCE

You can trust us – we guide you the right way!
Both commercial and technical consultation have got the highest priority for Mücher.

DELIVERY

3p.m. Cut Off - supplied next day!

INNOVATION

It is our companies aim to develop new products and to improve and further develop the existing range of products through rivaling new and innovative technologies.

AVAILABILITY

100% availability creates confidence!
Our entire product range is stocked in bulk.

SECURITY

On the safe side with Mücher!
All our products comply with and exceed the requirements of the latest DIN and European standards as well as national and international approvals. If it says MISSION you can depend on a safe installation process for the installer.
